Red Hat Enterprise Linux custom iso development process

1
Initial Environment Build (Base RHEL install) [firstbuild.sh]

→

2
Customize and build the first iso [rebuild.sh]

→

3
Install the first iso into new VM (Dev env)

↓

4
Install any other packages, further customize kickstart.cfg [setuplocalrepo.sh]

←

5
Obtain updated RPMs

←

6
Slipstream and shrink a second iso [shrink-iso.sh] [slipstream-updates.sh]

↓

7
Build final iso and test [rebuild.sh]

8 - Repeat as needed
